DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 4-7, 9-12, 15-17, 19, 21-23 and 27-29 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The chemical make-up of the water-soluble or water-dispersible polymeric film or web are critical or essential to the practice of the invention, but not included in the claims is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The polymers within the scope of this claim must be specifically disclosed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4-7, 9-12, 15-17, 19, 21-23 and 27-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ryan et al. (U.S. Patent 4,123,140).

Ryan discloses forming an array of pavement elements (Figure 5, for example) interconnected by a carrier web (10, 13). The connection between elements is frangible. Ryan

Art Unit: 3671

discloses that the web can be made from a wide variety of polymeric materials (see column 3, lines 36-53, for example); therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used a water-soluble or water-dispersible material. Regarding the recitations with respect to pavement, there are no recitations which distinguish these recitations from the substrates discussed in Ryan. There are also no claim recitations which prevent the elements of Ryan from meeting the recitations of discrete pavement elements.

The configurations of webs (10, 13) meet the recitations of claim 4.

The adhesive (51) is preferably pressure sensitive, and there is a liner (51b) covering the adhesive.

The web is severed.

Beads (22) meet the recitation of a retroreflective lens.
